Sand Producers WA
INDUSTRY ASSOCIATION

Plaster Sand - Typical Analysis

Legacy technical-report reference from the former Sand Producers WA website.

Archived report source not recoverable

The former Sand Producers Association of WA Products page linked a document at this exact filename for Plaster Sand typical analysis.

The original laboratory sheet, particle-size results and test values were not present in the recoverable archive. They have therefore not been recreated or inferred.

This file preserves the legacy URL so the rebuilt website does not contain a broken technical-resource link. Replace it with the original laboratory report if a copy is recovered.

Plaster Sand

Yellow or orange sand with less clay content than bricklaying sand and a slightly coarser texture. Used for rendering, floor tiling, paving and topdressing.
